

PRETEXT

WRITE ONCE, READ ANYWHERE

Robert A. Beezer

University of Puget Sound

AFRICAN MATHEMATICS CONFERENCE

NOVEMBER 20, 2020

INTRODUCTION

WHAT IS PRETEXT?

- An authoring and publishing system:
 - Extensive support for mathematics (and STEM)
 - Designed to create openly licensed materials
- An abstract specification of a scholarly document
- Implementations of conversions to various formats
- A modern replacement for LaTeX
- A commitment to creating accessible materials
- A community of instructors, authors, and publishers

HISTORY

- A First Course In Linear Algebra: textbook born with an open license (2004)
- PreTeXt: initiated with a Shuttleworth Flash Grant (2013)
- Teaching at AIMS-ZA with open textbooks and Sage (2010-2018)
- UTMOST—US NSF-supported research studies (2010-14, 2016-22)
- Braille: National Federation of the Blind, American Institute of Mathematics (2019, 2020)

READ ANYWHERE

KEY IDEA

The PreTeXt authoring language captures an author's intent and document structure, **AS THE AUTHOR WRITES**.

An author concentrates on **CONTENT** and is not able to influence **PRESENTATION**.

PDF, FOR PRINT AND SCREEN

- Via LaTeX, two slightly different PDFs are possible.
- Electronic is different than hardcopy print.
 - Active links, colored?
 - Color versus B/W
 - One-sided v. two-sided
 - Page size, margins

- A superior offline format
- On desktops or laptops
- Or on tablets or dedicated devices
- Example: Foliate reader on Linux

5.2 Dihedral Groups

Another special type of permutation group is the dihedral group. Recall the symmetry group of an equilateral triangle in [Chapter 3](#). Such groups consist of the rigid motions of a regular n -sided polygon or n -gon. For $n = 3, 4, \dots$ we define the **n th dihedral group** to be the group of rigid motions of a regular n -gon. We will denote this group by D_n . We can number the vertices of a regular n -gon by $1, 2, \dots, n$ ([Figure 5.2.1](#)). Notice that there are exactly n choices to replace the first vertex. If we replace the first vertex by k then the second vertex must be replaced either by vertex $k + 1$ or by vertex $k - 1$ hence, there are $2n$ possible rigid motions of the n -gon. We summarize these results in the following theorem.

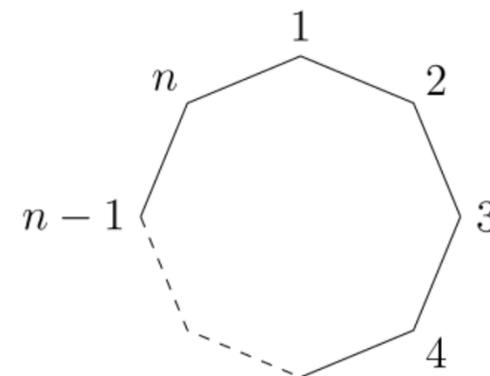

Figure 5.2.1. A regular n -gon

Theorem 5.2.2. *The dihedral group, D_n is a subgroup of S_n of order $2n$*

Theorem 5.2.3. *The group D_n $n \geq 3$ consists of all products of the two elements r and s satisfying the relations*

$$\begin{aligned} r^n &= 1 \\ s^2 &= 1 \\ srs &= r^{-1}. \end{aligned}$$

Proof. The possible motions of a regular n -gon are either reflections or rotations ([Figure 5.2.4](#)). There are exactly n possible rotations:

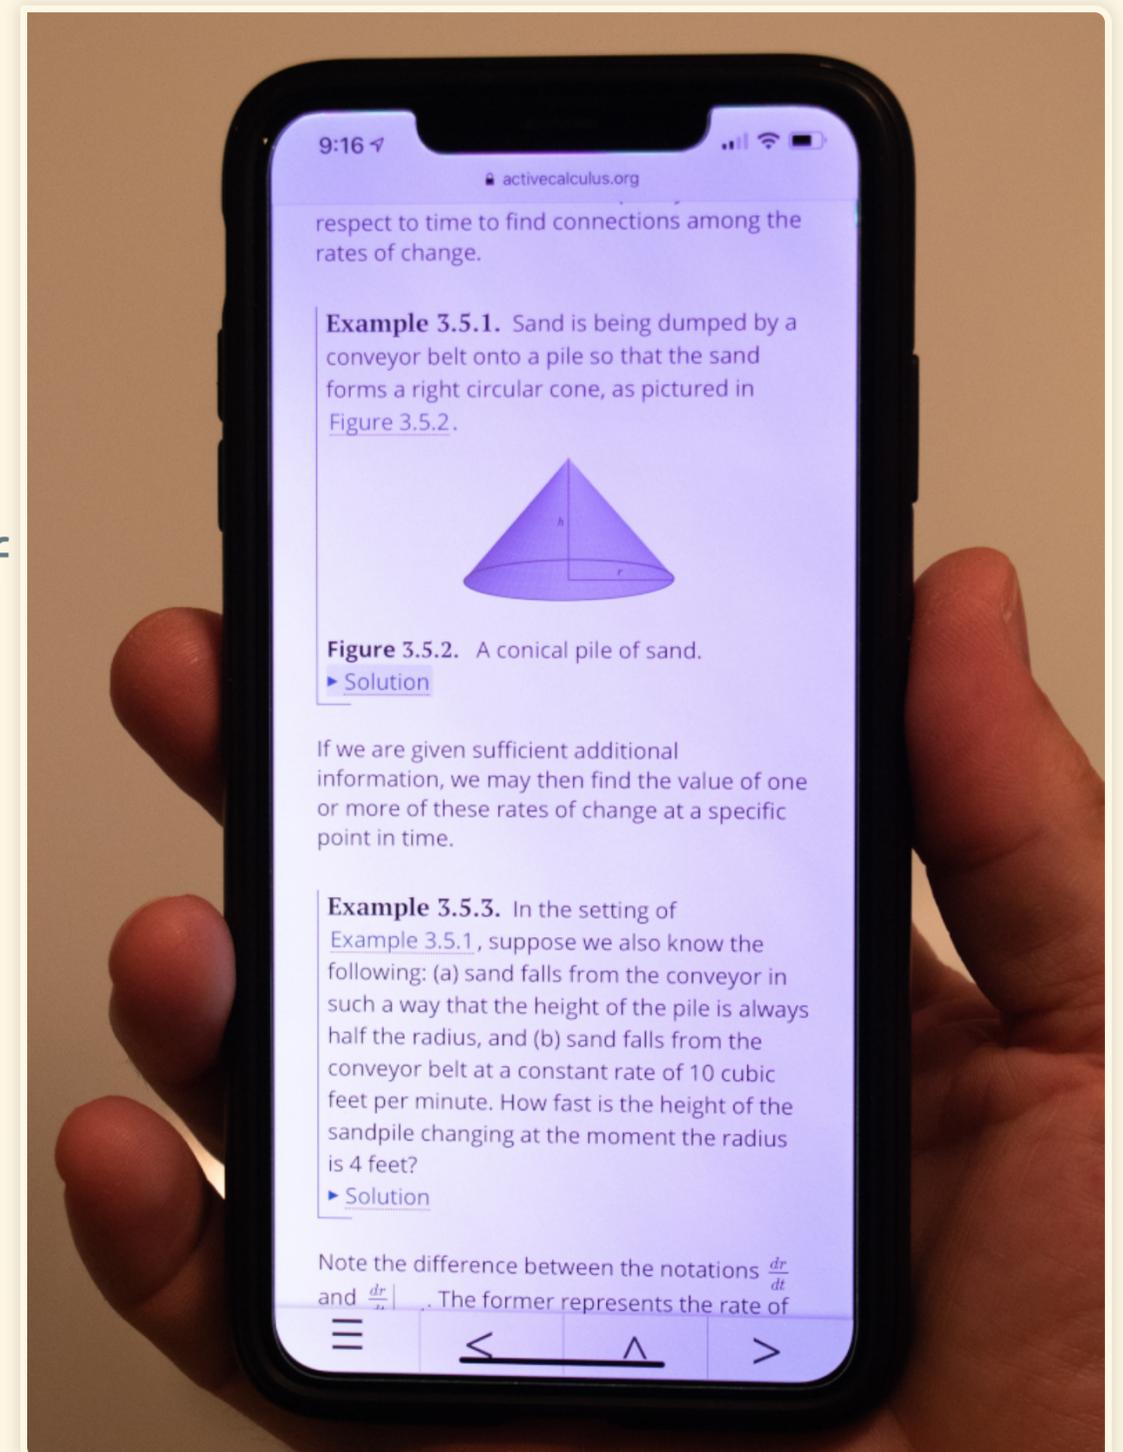

$$\text{id}, \frac{360^\circ}{n}, 2 \cdot \frac{360^\circ}{n}, \dots, (n-1) \cdot \frac{360^\circ}{n}.$$

We will denote the rotation $360^\circ/n$ by r . The rotation r generates all of the other rotations. That is,

$$r^k = k \cdot \frac{360^\circ}{n}.$$

HTML

- Everybody's favorite
- Takes advantage of HTML, CSS, Javascript
- Works well on small screens
- Accessible: works well with screen readers
- Math is powered by MathJax
- Many interactive features
- Principle #6: PreTeXt makes use of the full capabilities of the Web.

DEMONSTRATIONS

Judson's Abstract Algebra: Theory and Applications

ORCCA: Open Resources for Community College Algebra (Portland Community College)

INTERACTIVE ASSESSMENTS

- Author WeBWorK problems within PreTeXt source
- Host PreTeXt book on Runestone, with login and LMS
- More question types coming:
 - short answer, essay
 - multiple choice
 - true/false
 - fill-in
 - etc.
- MyOpenMath: preliminary, PreTeXt “endpoint”
- NUMBAS, STACK?

The screenshot shows a PreTeXt interface with a table of contents on the left and a problem page on the right. The table of contents includes sections 4 (Graphing Lines) and 5 (Systems of Linear Equations). The problem page features a graph of a line and three questions (a, b, c) with input fields for answers.

Contents Index < Prev ^ Up Next >

4 Graphing Lines

- Cartesian Coordinates
- Graphing Equations
- Exploring Two-Variable Data and Rate of Change
- Slope
- Slope-Intercept Form
- Point-Slope Form**
- Standard Form
- Horizontal, Vertical, Parallel, and Perpendicular Lines
- Summary of Graphing Lines
- Linear Inequalities in Two Variables
- Graphing Lines Chapter Review

5 Systems of Linear Equations

- Solving Systems of Linear Equations by Graphing
- Substitution
- Elimination
- Systems of Linear Equations Chapter Review

6 Exponents and Polynomials

- Exponent Rules
- Scientific Notation
- Adding and Subtracting Polynomials
- Multiplying Polynomials

Authored in PreTeXt
POWERED BY MathJax

Remark 4.6.4 Alternative Point-Slope Form. It is also common to define point-slope form as

$$y - y_0 = m(x - x_0) \quad (4.6.2)$$

by subtracting y_0 from each side. Some exercises may appear using this form.

Checkpoint 4.6.5.

Consider the line in this graph:

a. Identify a point visible on this line that has integer coordinates.

b. What is the slope of the line?

c. Use point-slope form to write an equation for this line, making use of a point with integer coordinates.

Solution:

BRAILLE

Principle #11: PreTeXt recognizes the inherent value in producing material that is accessible to everyone.

- MathJax makes Nemeth braille
- `liblouis` makes braille for literary text
- `liblouis` formats an embossed page
- One-line (electronic) display is also possible
- PreTeXt makes this integration possible
- Working on tactile graphics for diagrams with labels
- This talk could be converted to braille!

BRAILLE EXAMPLE

A slide from a recent talk

```

JUPYTER NOTEBOOKS

- Computational notebook format
- Popular in data science community
- We support a Sage kernel
- Conversion could use some attention

WRITE ONCE

THE PRETEXT LANGUAGE

- **PHILOSOPHY**

- Structure and content
- VERSUS
- Presentation

- **REALIZATION**

- Structure: an XML vocabulary (eXtensible Markup Language)
- Not Markdown, ASCIIDoc, JSON, YAML, MediaWiki, Pandoc, ...
- Math content: still LaTeX syntax (AMS Math)

- **PAYOFF**

- Multiple outputs from a single source
- Powerful and flexible processing with XSL (eXtensible Stylesheet Language)
- Author with your favorite text editor
- Cross-platform open-source toolchain
- Principle #3: PreTeXt documents serve as a single source which can be easily converted to multiple other formats, current and future.

AN AUTHOR-FRIENDLY XML VOCABULARY

- `<book>`, `<chapter>`, `<section>`, `<subsection>`
- `<theorem>`: `<title>`, `<statement>`, `<proof>`
- `<p>`, ``, ``, `<dl>`, ``, `<q>`, ``
- `<m>`, `<me>`, `<md>/<mrow>`
- Extensive cross-reference support
- Excellent index creation
- Consistent element use
 - `<title>`
 - `<introduction>`
 - `<xref>`, `@xml:id`
- `\`, `$`, `{`, `}`, `_`, `^`, `%`, `#` authored normally (regular and verbatim text)
- Accented characters fine in Unicode (e.g. French)
- Only two dangerous characters: `<` and `&`
- (Authored as `<` and `&`;))

STRUCTURE OF SCHOLARLY DOCUMENTS

- Principle #1: PreTeXt captures the structure of textbooks and research papers
- *Strictly* separates content and style
- `<book>`, `<article>`, `<memo>`, `<slideshow>`, ...
- `<chapter>`, `<section>`, `<subsection>`, ...
- `<example>`, `<remark>`, `<theorem>`, ...
- `<figure>`, `<table>`, `<listing>`, ...
- **Mathematics: LaTeX inside** `<m>`, `<me>`, `<md>`
- **Slideshow:** `<slideshow>`, `<section>`, `<slide>`, ...
- Principle #2: PreTeXt is human-readable and human-writable.

PRETEXT XML EXAMPLE

```
<theorem xml:id="power-rule">
  <title>Power Rule</title>
  <index>power rule</index>

  <statement>
    <p>The derivative of <m> $f(x)=x^n$ </m>
    is <m> $f'(x)=nx^{n-1}$ </m>.</p>
  </statement>

  <proof>
    <p>Apply induction to the product
    <me> $f(x)=x^n=x \cdot x^{n-1}$ </me>
    using <xref ref="product-rule"/>.</p>
  </proof>
</theorem>
```

EXAMPLE OUTPUT

Theorem 4.4 (Power Rule). *The derivative of $f(x) = x^n$ is $f'(x) = nx^{n-1}$.*

Proof. Apply induction to the product

$$f(x) = x^n = x \cdot x^{n-1}$$

using [Theorem 4.1](#). □

COMMUNITIES AROUND TEXTBOOKS

PreTeXt does not have “users”. Instead there are:

- Students and Readers
- Instructors
- Authors
- Publishers

Principle #10: PreTeXt recognizes that scholarly documents involve the interaction of authors, publishers, scholars, instructors, students, and readers, with each group having its own needs and goals.

CONCLUSION

Principle #8: PreTeXt is free: the software is available at no cost, with an open license. The use of PreTeXt does not impose any constraints on documents prepared with the system.
